Practice questions taken related to this topic

Addition

You add to combine numbers to find a total amount. If the sum of a place value is 10 or more, you need to regroup. Write the last digit under the column you are adding and regroup (carry) the extra digit to the column to the left.

Good test takers estimate before adding to get an idea of what the answer should be. An estimate can also help you see whether your answer makes sense.

Example

Hide

Sasha had \$479. She earned \$28 more. How much money does she have now?

Estimate first.

Round to the nearest 100. → 500

Round to the nearest 10. → + 30

530

Step 1

Add the ones. The ones add up to 17 ones. Write 7 in the ones column. Regroup 1 ten to the tens place.

479
+ 28
— 7

9 + 8 = 17
← write underneath
← carry on top

Step 2

Add the tens. The tens add up to 10 tens. Write 0 in the tens column. Regroup the 1 hundred to the hundreds place.

11
479
+ 28
— 07

7 + 2 = 9 + 1 (carried from step 1)
= 10
← write underneath
← carry on top

Step 3

Add the hundreds.

11
479
+ 28
— 507

Check:

The answer \$507 is close to your estimate of \$530.
