

GED Mathematics Worksheet

Reading Graphs, Tables, and Computing Averages

50 Practice Questions

May 2026

Contents

1 Instructions

- This worksheet contains 50 questions covering graphs, tables, and averages from GED Mathematics lessons.
- Questions are organized by topic to help you focus on specific skills.
- Show your work for all calculations.
- A solutions document with complete worked answers is available separately.
- Calculator use is permitted where appropriate.

2 Part A: Reading and Interpreting Tables (Questions 1-10)

1. The table below shows quarterly sales (in thousands) for a retail store in 2025:

Quarter	Q1	Q2	Q3	Q4
Sales	\$45	\$62	\$58	\$71

What was the total sales for the year?

2. Using the table from Question 1, by how much did sales increase from Q1 to Q4?
3. A table shows the number of hours worked by five employees in a week:

Employee	Alice	Bob	Carol	David	Emma
Hours	40	38	42	35	45

Which employee worked the most hours?

4. Using the table from Question 3, how many total hours did all employees work?
5. A fitness center tracks daily membership sign-ups over one week:

Day	Mon	Tue	Wed	Thu	Fri	Sat
Sign-ups	8	12	15	11	18	22

On which day did the fitness center have the lowest number of sign-ups?

6. Using the table from Question 5, what was the total number of sign-ups for the week?
7. A grocery store tracks weekly produce sales (in pounds):

Produce	Apples	Broccoli	Carrots	Lettuce
Pounds Sold	240	180	160	200

How many more pounds of apples were sold than carrots?

8. Using the table from Question 7, if broccoli costs \$2.50 per pound wholesale, what is the total cost of broccoli sold?
9. A restaurant tracks customer satisfaction scores by meal type:

Meal Type	Breakfast	Lunch	Dinner	Late Night
Avg. Score (out of 10)	8.2	7.9	8.6	7.4

Which meal type had the highest satisfaction score?

10. Using the table from Question 9, what is the difference between the highest and lowest satisfaction scores?

3 Part B: Box Plots and Data Interpretation (Questions 11-20)

11. A box plot for test scores has the following values:

- Minimum: 45
- Q1 (Lower Quartile): 62
- Median: 75
- Q3 (Upper Quartile): 85
- Maximum: 98

What is the interquartile range (IQR)?

12. Using the box plot from Question 11, how many of the data values fall between Q1 and Q3?

13. A dataset has the following five-number summary:

- Min: 12
- Q1: 28
- Median: 42
- Q3: 56
- Max: 78

What is the range of the data?

14. Using the data from Question 13, what percentage of values are between the minimum and Q1?

15. A school tracks attendance percentages for a class throughout the year. The box plot shows:

- Min: 78%
- Q1: 88%
- Median: 92%
- Q3: 95%
- Max: 99%

Identify any outliers (values more than 1.5 times the IQR below Q1 or above Q3).

16. Using the attendance data from Question 15, how many quarters of the data lie above the median?

17. A box plot for monthly rainfall (in inches) shows:

- Q1: 2.5
- Median: 4.0

- Q3: 5.5

What is the IQR for this data?

- Using the rainfall data from Question 17, what is the lower outlier boundary?
- A dataset has $IQR = 20$ and $Q3 = 80$. What is $Q1$?
- A box plot shows that 50% of the data falls between $Q1 = 30$ and $Q3 = 50$. An outlier is defined as any value more than $1.5 \times IQR$ beyond the quartiles. What is the upper outlier boundary?

4 Part C: Combining Multiple Data Sources (Questions 21-30)

- Two stores reported their daily sales over three days:

Store	Day 1	Day 2	Day 3
Store A	\$500	\$620	\$580
Store B	\$450	\$510	\$640

Which store had higher total sales over the three days?

- Using the data from Question 21, what was the combined total sales for both stores?
- Two classes took a test with the following results:

Class	Number of Students	Average Score
Class A	25	78
Class B	30	82

What is the combined average score for both classes?

- A company has three departments with the following data:

Department	Employees	Avg. Salary
Sales	20	\$45,000
Marketing	15	\$55,000
Operations	35	\$50,000

What is the overall average salary across all departments?

- Two gyms track membership over four months:

Month	Gym X	Gym Y
Jan	150	200
Feb	165	210
Mar	180	205
Apr	195	220

Which gym had the greater increase from January to April?

26. Using the data from Question 25, what is the average monthly membership for Gym X over the four months?
27. Two regions reported quarterly revenue (in millions):

Region	Q1	Q2	Q3	Q4
North	12	15	18	22
South	10	14	16	20

What is the total revenue for both regions across all quarters?

28. Using the data from Question 27, which quarter had the highest combined revenue from both regions?
29. A survey asked people in three age groups about hours of exercise per week:

Age Group	Sample Size	Avg. Hours
18-30	120	5.2
31-45	100	4.1
46+	80	2.8

What is the overall average hours of exercise for all respondents?

30. Using the exercise data from Question 29, how many total respondents were surveyed?

5 Part D: Mean, Median, and Mode (Questions 31-40)

31. Find the mean of the dataset: 12, 15, 18, 14, 16
32. Find the median of the dataset: 24, 31, 19, 28, 25, 22, 29
33. Find the mode of the dataset: 5, 7, 5, 9, 5, 8, 7, 5
34. A dataset has the values: 8, 12, 15, 20, 25. If a value of 100 is added, how does the median change?
35. The mean of five numbers is 24. If four of the numbers are 18, 22, 26, and 28, what is the fifth number?
36. A dataset has six values with a median of 30. If the values in order are 15, 22, x , 35, 40, 48, what is x ?
37. Find the mean, median, and mode for: 42, 48, 42, 45, 50, 42, 48
38. A teacher grades papers and records scores: 85, 92, 88, 90, 85, 92, 88, 95. What is the mode?

39. The mean age of a group of 8 people is 35 years. If a 9th person aged 50 joins the group, what is the new mean age?
40. A dataset has the values: 10, 15, 20, 25, 30, 35, 40. Which measure of central tendency (mean, median, or mode) best represents this data and why?

6 Part E: Weighted Averages and Complex Problems (Questions 41-50)

41. A student's grade is calculated as follows: Homework (30%), Midterm (40%), Final (30%). The student earned 85 on homework, 78 on the midterm, and 88 on the final. What is the weighted average grade?
42. A recipe calls for 2 cups of sugar (worth \$3 per cup) and 3 cups of flour (worth \$1 per cup). What is the average cost per cup of the final mixture?
43. A portfolio contains 100 shares of Stock A (\$50/share) and 200 shares of Stock B (\$75/share). What is the weighted average price per share?
44. An employee worked 20 hours at \$15/hour and 10 hours at \$18/hour. What is the weighted average hourly wage?
45. A company's quarterly profits are: Q1: \$50,000 (weight 1), Q2: \$60,000 (weight 2), Q3: \$55,000 (weight 1.5), Q4: \$70,000 (weight 1.5). What is the weighted average quarterly profit?
46. A store sells three types of apples at different prices:

Type	Pounds Sold	Price per Pound
Red	80	\$1.50
Green	60	\$1.75
Golden	40	\$2.00

What is the weighted average price per pound of apples sold?

47. A class with 25 students has an average test score of 82. Another class with 20 students has an average test score of 88. What is the combined average for both classes?
48. A weighted average calculation uses weights of 0.2, 0.3, 0.25, and 0.25 for values 60, 75, 80, and 90 respectively. What is the weighted average?
49. In a survey, 40% of respondents chose Option A (satisfaction rating 8), 35% chose Option B (satisfaction rating 6), and 25% chose Option C (satisfaction rating 5). What is the weighted average satisfaction rating?
50. A company manufactures a product in two facilities:

Facility	Units Produced	Cost per Unit
Facility A	500	\$8
Facility B	700	\$6

What is the weighted average cost per unit?

7 Answer Key

See the Solutions document for complete worked solutions to all 50 questions.
