

GED Math Worksheet: Tables, Graphs, and Interpreting Data

Name: _____ Date: _____

Instructions: Answer all 30 questions. Show your work where applicable. You may use a calculator for these problems.

Part A: Tables (Questions 1-6)

Questions 1-3 refer to the following table:

Month	Jan	Feb	Mar	Apr
Sales (\$1000s)	45	52	38	61

1. What were the total sales for the four months?
2. What is the average monthly sales for this period?
3. By how much did sales increase from February to April?

Questions 4-6 refer to the following table:

Product	Price	Quantity Sold	Revenue
Widget A	\$8	125	\$1,000
Widget B	\$12	87	\$1,044
Widget C	\$15	92	\$1,380
Widget D	\$10	156	\$1,560

4. Which product generated the highest revenue?

5. If Widget B's price increases by 20%, what is the new price?

6. What is the total number of widgets sold across all products?

Part B: Bar Graphs (Questions 7-12)

Questions 7-9 refer to the following data about monthly temperatures (in °F):

Month: Jan (32), Feb (35), Mar (45), Apr (58), May (72), Jun (85)

7. What is the difference in temperature between the warmest and coldest month listed?

8. What is the average temperature for the six months shown?

9. Between which two consecutive months is the greatest temperature increase?

Questions 10-12 refer to the following data about student enrollment in classes:
Math (120), Science (95), English (110), History (85), Art (60)

10. How many more students are enrolled in Math than in Art?
11. What is the total enrollment across all five classes?
12. What percentage of total enrollment is in Science? (Round to the nearest whole percent)

Part C: Line Graphs (Questions 13-17)

Questions 13-17 refer to the following data showing website traffic (in thousands of visitors) over six weeks:

Week 1 (12), Week 2 (15), Week 3 (14), Week 4 (18), Week 5 (22), Week 6 (20)

13. During which week did the website experience the highest traffic?
14. What was the change in visitors from Week 1 to Week 6?
15. During which consecutive weeks was there a decrease in visitors?

16. What is the average number of visitors across all six weeks?
17. If the trend from Week 4 to Week 5 continues, how many visitors would you predict for Week 7?

Part D: Circle Graphs (Questions 18-22)

Questions 18-22 refer to the following data about a budget breakdown for a household (3,600 dollars total):

Housing (40%), Food (25%), Transportation (18%), Utilities (12%), Entertainment (5%)

18. How much money is allocated to Housing?
19. What is the difference between the amount spent on Food and Entertainment?
20. If the Entertainment budget is increased by 3%, how much money would be allocated to it?
21. What percentage of the budget is spent on Housing and Transportation combined?
22. If total household income increases to \$4,000 but percentages remain the same, how much will be spent on Food?

Part E: Scatter Plots (Questions 23-26)

Questions 23-26 refer to the following data showing the relationship between study hours and test scores:

Study Hours: 1, 2, 3, 4, 5, 6 Test Scores: 62, 68, 75, 81, 87, 92

23. What type of correlation does this data show?

24. Based on the pattern, what would you estimate the test score to be for 7 hours of study?

25. What is the range of test scores shown in the data?

26. Is there an outlier in this dataset? Explain your answer.

Part F: Histograms (Questions 27-29)

Questions 27-29 refer to the following histogram data showing distribution of ages at a community center:

Age 18-25 (8), Age 26-35 (15), Age 36-45 (12), Age 46-55 (10), Age 56-65 (5)

27. What is the total number of people represented in the histogram?

28. Which age group has the highest frequency?

29. What percentage of people are age 46 or older? (Round to the nearest whole percent)

Part G: Box Plots (Question 30)

Question 30 refers to the following dataset: 12, 15, 18, 22, 25, 28, 30, 32, 35

30. Find the median, lower quartile, upper quartile, and interquartile range for this dataset.
