

GED Math Assignment 10

1. Plot the following lines on the grid below.

a) 1. $y = 2x + 2$
2. $y = -1.5x - 3$

b) 1. $6y - 3x = -4$
2. $2x + 5y = 10$

2. George used the following graph to plan his speed and distance for an upcoming bicycle race.

a) How fast is George planning to ride?

b) If the race covers 200 miles, how long will it take George to complete it?

3. Write the equation of a line that passes through points $(4, 7)$ and $(2, 5)$.

4. Bob the builder wants to use a rise of 6.12 inches. Find the length of the tread and the slope of the staircase.

5. By law in a certain region, the limit for slope of a ramp is given as 1:12. To comply with this law, what's the maximum rise in inches for every foot of length?

6. Write the equation of the line for the following graph.

7. A. Use the slope-intercept form, $y = mx + b$, to find the equation of the line that passes through the given point and has the given slope.

1. $(1, -2); m = -4$

2. $(-1, -4); m = 2$

3. $(-4, 2); m = -\frac{1}{3}$

B. Use the point-slope form, $y - y_1 = m(x - x_1)$, to find the equation of the line that passes through the given point and has the given slope.

4. $(2, 1); m = 3$

5. $(2, 0); m = -\frac{1}{3}$

6. $(1, -2); m = 1$
