

GED Math Assignment 2 Solutions

#1. omit

$$\#16. \text{ speed} = \frac{\text{distance}}{\text{time}}$$

$$25 = \frac{75}{t}$$

$$t = \frac{75}{25}$$

$$t = 3 \text{ h}$$

$$17. \text{ Revenue} = (\# \text{ items})(\text{cost per item})$$

$$640 = n(20)$$

$$n = \frac{640}{20}$$

$$n = 32 \text{ items}$$

$$11. (\$25)(8 \text{ bills})$$

$$= \$200$$

$$12. (a) (x^2)(x^4) = x^{2+4}$$

$$= x^6$$

(b) can't be simplified (different bases)

$$(c) \frac{16x^2y^3}{4x^4y^2} = \left(\frac{16}{4}\right)x^{2-4}y^{3-2}$$

$$= 4x^{-2}y^1$$

$$= \frac{4y}{x^2}$$

B. 1 gallon = 3.79 liters and 1 litre = 1000 mL
 thus

$$\approx \frac{3(3.79)}{0.355} \quad 355 \text{ mL} = 0.355 \text{ L}$$

= 32 containers.

28. Assume 10 servings per box (on the test they would tell you this)

$$\frac{4.94}{10}$$

= \$0.49 per serving

28. Leftover = $23\frac{1}{4} - 8\frac{7}{8}$

$$= \frac{93}{4} - \frac{71}{8}$$

$$= \frac{186 - 71}{8}$$

$$= \frac{115}{8}$$

$$= 14\frac{3}{8} \text{ yards}$$

19. $\left(\frac{3}{16}\right) 400 = \frac{3 \times 400}{16}$
 $= 75 \text{ people}$

20. Area = Length $\times$ Width

but 1 ft = 0.3048 m

$$\approx \text{Area} = 16(0.3048) \times 34(0.3048)$$

$$= 50 \text{ m}^2$$
