Toolbox

Addition

You add to combine numbers to find a total amount. If the **sum** of a place value is 10 or more, you need to **regroup**. Write the last digit under the column you are adding and regroup (carry) the extra digit to the column to the left.

Good test takers estimate before adding to get an idea of what the answer should be. An **estimate** can also help you see whether your answer makes sense.

Example

Hide

Sasha had \$479. She earned \$28 more. How much money does she have now?

Estimate first.

Round to the nearest 100. $\rightarrow$ 500

Round to the nearest 10. $\rightarrow$ $\begin{array}{r} + \quad 30 \\ \hline 530 \end{array}$

Step 1

Add the ones. The ones add up to 17 ones. Write 7 in the ones column. Regroup 1 ten to the tens place.

$$\begin{array}{r} 1 \\ 479 \\ + 28 \\ \hline 7 \end{array}$$

Step 2

Add the tens. The tens add up to 10 tens. Write 0 in the tens column. Regroup the 1 hundred to the hundreds place.

$$\begin{array}{r} 11 \\ 479 \\ + 28 \\ \hline 07 \end{array}$$

Step 3

Add the hundreds.

$$\begin{array}{r} 11 \\ 479 \\ + 28 \\ \hline 507 \end{array}$$

Check: The answer **\$507** is close to your estimate of \$530.
