Subtracting Fractions

To subtract like fractions, just subtract the numerators. The denominator remains the same.

$$\frac{3}{8} - \frac{1}{8} = \frac{2}{8} = \frac{1}{4}$$

The answer to an addition or subtraction problem may need to be simplified. Always write your answers in lowest terms. Change improper fractions to mixed numbers.

Example

$$\frac{3}{4} - \frac{1}{4}$$

Step 1
Subtract the numerators.

$$\frac{3}{4} - \frac{1}{4} \leftarrow 3 - 1 = 2$$

Step 2
Place the result over the denominator.

$$\frac{3}{4} - \frac{1}{4} = \frac{2}{4} \leftarrow 3 - 1 = 2$$

Step 3
Simplify if necessary.

$$\frac{3}{4} - \frac{1}{4} = \frac{2}{4} \div \frac{2}{2} = \frac{1}{2}$$

Example 2:

$$\frac{2}{3} - \frac{1}{4} = \frac{8-3}{12}$$
$$= \frac{5}{12}$$
