

GED Math: Decimals & Fractions

20 Practice Questions with Full Solutions

November 6, 2025

Practice Questions

1. What is the value of the digit 7 in 0.3075? (State its place value and its value as a number.)
2. Arrange in ascending order: 0.56, 0.506, 0.65.
3. Write 0.375 as a fraction in simplest form.
4. Compute: $12.5 + 3.75$.
5. Compute: 0.08×2.5 .
6. Compute: $4.5 \div 0.15$.
7. Simplify the fraction $\frac{36}{60}$.
8. Find x : $\frac{5}{8} = \frac{x}{48}$.
9. Compute: $\frac{3}{4} + \frac{2}{3}$ (express your answer as a mixed number).
10. Compute: $\frac{7}{10} - \frac{3}{8}$.
11. Compute: $\frac{5}{6} \times \frac{9}{10}$.
12. Compute: $\frac{7}{12} \div \frac{14}{9}$.
13. Convert $\frac{7}{20}$ to a decimal.
14. Write $0.\overline{72}$ (repeating 72) as a fraction in simplest form.
15. A jacket costs \$24.50. Sales tax is 6%. What is the total price?
16. A recipe uses $\frac{3}{4}$ cup of sugar to make 12 cookies. How much sugar is needed for 18 cookies (assume direct proportion)? Give your answer as a mixed number.
17. Find 15% of 80.

18. Compute: $5.2 - 0.87 + 3.05$.
19. Compute: $2\frac{1}{3} + 1\frac{3}{4}$ (give a mixed number).
20. Which is larger: $\frac{3}{5}$ or 0.58? Justify your answer.

Full Solutions

1. In $0.\underline{3}\underline{0}\underline{7}\underline{5}$, the 7 is in the **thousandths** place. Its value is $7 \times \frac{1}{1000} = \boxed{0.007 = \frac{7}{1000}}$.
2. Compare using place value (pad with zeros): 0.506, 0.560, 0.650. Thus ascending order is $\boxed{0.506 < 0.56 < 0.65}$.
3. $0.375 = \frac{375}{1000} = \frac{375 \div 125}{1000 \div 125} = \frac{3}{8}$. So $\boxed{\frac{3}{8}}$.
4. Align decimals: $12.50 + 3.75 = 16.25$. So $\boxed{16.25}$.
5. $0.08 \times 2.5 = (8 \times 10^{-2}) \times (25 \times 10^{-1}) = 200 \times 10^{-3} = \boxed{0.200 = 0.20}$.
6. $4.5 \div 0.15 = \frac{45}{10} \div \frac{15}{100} = \frac{45}{10} \times \frac{100}{15} = \frac{45 \times 10}{15} = \frac{450}{15} = \boxed{30}$.
7. $\frac{36}{60} = \frac{36 \div 12}{60 \div 12} = \frac{3}{5}$. So $\boxed{\frac{3}{5}}$.
8. Cross-multiply: $8x = 5 \times 48 \Rightarrow 8x = 240 \Rightarrow x = 30$. So $\boxed{30}$.
9. $\frac{3}{4} + \frac{2}{3} = \frac{9}{12} + \frac{8}{12} = \frac{17}{12} = 1\frac{5}{12}$. So $\boxed{1\frac{5}{12}}$.
10. LCD = 40: $\frac{7}{10} = \frac{28}{40}$, $\frac{3}{8} = \frac{15}{40}$. Difference = $\frac{28}{40} - \frac{15}{40} = \frac{13}{40}$. So $\boxed{\frac{13}{40}}$.
11. $\frac{5}{6} \times \frac{9}{10} = \frac{45}{60} = \frac{3}{4}$. So $\boxed{\frac{3}{4}}$.
12. $\frac{7}{12} \div \frac{14}{9} = \frac{7}{12} \times \frac{9}{14} = \frac{7}{14} \times \frac{9}{12} = \frac{1}{2} \times \frac{3}{4} = \boxed{\frac{3}{8}}$.
13. $\frac{7}{20} = \frac{35}{100} = 0.35$. So $\boxed{0.35}$.
14. Let $x = 0.\overline{72}$. Then $100x = 72.\overline{72}$. Subtract: $100x - x = 72 \Rightarrow 99x = 72 \Rightarrow x = \frac{72}{99} = \frac{8}{11}$. So $\boxed{\frac{8}{11}}$.
15. Tax = $0.06 \times 24.50 = 1.47$. Total = $24.50 + 1.47 = \boxed{\$25.97}$.
16. Scale by factor $\frac{18}{12} = \frac{3}{2}$: $\frac{3}{4} \times \frac{3}{2} = \frac{9}{8} = 1\frac{1}{8}$. So $\boxed{1\frac{1}{8} \text{ cup}}$.
17. $15\% = 0.15$. Then $0.15 \times 80 = 12$. So $\boxed{12}$.
18. $5.2 - 0.87 = 4.33$; then $4.33 + 3.05 = 7.38$. So $\boxed{7.38}$.
19. $2\frac{1}{3} = \frac{7}{3}$ and $1\frac{3}{4} = \frac{7}{4}$. Sum = $\frac{28}{12} + \frac{21}{12} = \frac{49}{12} = 4\frac{1}{12}$. So $\boxed{4\frac{1}{12}}$.
20. $\frac{3}{5} = 0.6$, and $0.6 > 0.58$. Therefore $\boxed{\frac{3}{5} \text{ is larger}}$.
