

TPT Example (Basic Shapes Lesson 2)

What are the measures of angles A through G?

$$\angle A = 180^\circ - 120^\circ \text{ (supplementary angle with } \angle \alpha) \\ = 60^\circ$$

$$\angle B = 120^\circ \text{ (verticle angle to } \angle \alpha)$$

$$\angle E = 60^\circ \text{ (corresponding angle with } \angle A) \text{ or F-pattern (TPT)}$$

$$\angle F = 120^\circ \text{ (" " " } \angle \alpha)$$

$$\angle G = 60^\circ \text{ (verticle angle with } \angle E)$$

$$\angle C = 60^\circ \text{ (corresponding angle with } \angle G)$$

$$\angle D = 120^\circ \text{ (supplementary with angle E)}$$
