

Cylinders

A **cylinder** is a three-dimensional shape with circular bases. The two bases are identical and parallel.

To find the volume of a cylinder, find the area of one base and multiply by the height.

The GED math formula sheet includes the formula for volume of a cylinder, which multiplies the area of one circular base (πr^2) by the height h .

Volume (V) of a Cylinder $V = \pi r^2 h$, where r = radius and h = height

Example

Hide

Find the volume of a cylinder with a radius of 3 centimeters and a height of 2 centimeters.

$$\begin{aligned} V &= \pi r^2 h \\ &= 3.14 \cdot 3^2 \cdot 2 \\ &\approx 56.52 \text{ cm}^3 \end{aligned}$$

The cylinder has a volume of about **56.52 cubic centimeters** or **56.52 cm³**.
