Find Missing Angles

A triangle is a three-sided shape whose angles always add up to 180° .

EXAMPLE

In $\triangle ABC$, $m\angle A = (3x + 5)^\circ$, and $m\angle B = (6x - 20)^\circ$, and $m\angle C = (4x)^\circ$. What are the measurements of each angle?

ANSWER:

$m\angle A + m\angle B + m\angle C = 180^\circ$

$(3x + 5) + (6x - 20) + 4x = 180$

$13x - 15 = 180$

$13x = 195$

$x = 15$

Use $x = 15$ to find the measures of the angles.

$m\angle A = 3x + 5 = 3(15) + 5 = 50^\circ$

$m\angle B = 6x - 20 = 6(15) - 20 = 70^\circ$

$m\angle C = 4x = 4(15) = 60^\circ$
