Domain and Range

Domain and Range

Example 1

Hide

What is the domain of $f(x) = x + 3$?
The domain is $\mathbb{R}$. You can use any real number for x .

Example 2

Hide

What is the domain of $f(x) = \frac{1}{x-2}$?
The domain is **all real numbers except for 2**; $x \neq 2$.
If x equals 2, the denominator of the fraction will be 0.

Example 3

Hide

What is the domain of $f(x) = \sqrt{x-2}$?
The domain is **all real numbers greater than or equal to 2**; $x \geq 2$.
If $x < 2$, then the number in the square root symbol will be negative.

Example 4

Hide

What is the domain and range of $g(x)$?

The domain is **all real numbers except 1 and -3**. If x is equal to 1 or -3, the graph has an open circle to show that there is no corresponding value for y .
The range is **all real numbers except 2 and -2**. There are no values of x that can produce either of these results. The open circles tell you that these values are missing from the range.
