

Find a Missing Measurement

Sometimes you need to calculate the measure of one or more sides before you can find the perimeter.

Example

Hide

The drawing shows a room from a dollhouse with measurements in inches. What is the perimeter of the room?

Before you can add all the sides, you need to find the missing sides, x and y .

Step 1
Look at the horizontal sides The sum of the sides labeled 8 and x is equal to the side labeled 18.
 $8 + x = 18$, so $x = 10$

Step 2
Look at the vertical sides The sum of the sides labeled 7 and 5 is equal to the side labeled y .
 $5 + 7 = y$, so $y = 12$

Step 3.
Add the sides.
 $8 + 5 + 10 + 12 + 18 + 7 = 60$
The perimeter of the room is **60 inches**.
