Lesson 3: Circles and Complex Figures

 Related Questions:
[Practice questions taken related to this topic](#)

Hide

Divide the figure into smaller parts.

Here, the figure is divided into a rectangle and a square.

Find the areas of the parts.

Rectangle: $A = 10 \cdot 9$
 $= 90 \text{ sq in}$

Square: $A = 5 \cdot 5$
 $= 25$ sq in

Find the total area

$$90 + 25 = \mathbf{115 \text{ sq in}}$$

Hide

Step 1

A rectangle is cut out of a square.

Find the areas of the parts.

Square: $A = 20 \cdot 20$
 $= 400 \text{ cm}^2$

Rectangle: $A = 14 \cdot 9$
 $= 126 \text{ cm}^2$

Find the area of the shaded portion.

$$400 - 126 = 274 \text{ cm}^2$$
