Highlights

When given a set of collected data, you can use your knowledge of probability to draw conclusions about what will likely happen.

Hide

Percent of Positive Responses to Free Offer by Zip Code

Hide

Since there is a 100% chance that the name will either be in the zip code or not, the two situations are complements. Because of this, the first probability can be subtracted from 100% to get its complement.

Since 54% is greater than 46%, it is more likely that the name will be drawn from a zip code other than 90036.

The chance is **54%**.

Hide

Find 15% of 220.

$$220 \times 0.15 = 33$$

Of the 220 calls, **33 responses** will probably be positive.
